Re: (54995) Software Test Developer

To Whom It May Concern:

While searching the job postings on the UBC EngCore website, I came across an opening for a Software Test Developer at Gumstix Research Ltd. I would like to meet with you to discuss this opportunity further. As a UBC software engineering student, I believe my knowledge of database systems and programming practices will fit your company's dynamic environment.

As a student with experience in programming and working with online database systems, I can offer skills in basic programming languages such as Python & Javascript for your company. I am comfortable working with various software and operating systems such as Linux and Windows. In fact, in my past courses I have built an image processing application in Python and an online database system through Oracle JDBC. My experience with the Agile development and testing methodologies should also be an asset to working with your team.

Your other requirements also include the ability to work creatively in teams and individually. I have had active experience in Scrum meetings through several courses and can provide effective written and oral communication with peers. I am very effective at multitasking and I believe my skills and adaptability to new environments will be a good fit to being a part of the team at Gumstix.

Thank you for taking the time to review my application. To arrange an interview, please contact the UBC Co-op Office at 604.822.6995 or coop.interviews@ubc.ca. I hope to hear from you in the near future.

Sincerely,

James Tu
